Some of you have multiple children logging into Schoology on the same device. This can make it challenging to switch between both accounts.

Here are two solutions:

**Option 1:** Set up a different account on the computer for each child using Schoology. This will be the easiest option to keep logins separate.

**Option 2:** Open an *Incognito Window*. This brings up private browsing and allows you to keep the logins open on separate web pages. Keep in mind that each time you close this window you will need to log back in.
How to Open an Incognito Window

Launch Google Chrome. Chrome is the most compatible browser for Schoology.

Click on the 3 vertical dots in the upper right.

Click on “New Incognito Window.” This will launch a separate window so another user can log into Schoology.
